

CERTAINLY

They call it a sale, but it is our own kind which goes on continuously. Just now the stock embraces regular all year round shoes of the best American and foreign manufacture, covering staple and extreme styles, also a large quantity of manufacturers surplus floor goods which were left on the makers hands because conditions in some localities caused the retailer to cancel his order after the shoes were made and the manufacturer then sold them to us at a loss.

The stock and offerings by us also cover sample pairs used by the wholesaler's traveling salesmen, which we bought at trifling prices for cash. We are in a strong position to give you bargains, as these prices and our show windows will prove to you.

Infants' 25c soft sole Moccasins, assorted colors, sizes 0 to 4	5c
Infants' 50c soft sole shoes, lace or button; assorted colors, 0 to 4	15c
Child's \$1.00 vici kid or patent colt shoes, excellent value	65c

CANANEA DISTRICT HAS NEW TOWN, CATALINA

Copper Strike Made at Cubana Mine—Santa Teresa Reopened.

Cananea, Sonora, Mexico, Feb. 28.—The mill of the Calumet and Sonora company's property, northwest of Cananea, is operating only one shift a day at the present time. The reason for this is that pending the installation of the Huff separating equipment the piling of zinc concentrates will be done away with. The zinc-copper middlings have been piled up at a point near the mill for some time and a large amount is present awaiting separation. Besides the Huff plant the company will also install in the mill an additional number of concentrating tables, five in number, which will mean the enlargement of the mill to some extent. At the mine conditions are exceptionally good and very encouraging. The winze from the 400-foot level has reached a depth of 65 feet and is in first-class ore, which runs high in silver. The entire distance, lead, copper and zinc values are also fairly high in the winze, the copper averaging 3 percent.

Build Schoolhouse and Jail.
The company has recently established a school building for the use of the children of the employees, and has also built a jail, which will be used to keep the employees within bounds. A number of new dwelling houses have also been erected recently. There is quite a settlement at the mine and mill, and the company has named it Catalina, the name of the mine.

Rich Copper Strike.
A rich copper strike has been made at the Cubana mine, which is located about 30 miles southeast of Cananea and about 12 miles northeast of the Santa Rosalia mine. The property is that of the Cananea Consolidated Copper company, organized in 1903.

The ore was encountered at a depth of 120 feet, in a winze sunk from the 100 foot level. The ore was found 30 feet below the first level and has been drifted upon for a distance of 50 feet, the entire length of the drift being in ore which will average 22 percent copper. The property is being worked by the Lindsay, Greville and Co. of London in superintendence. The property comprises 244 pertenencias.

Reopening Santa Teresa.
The Santa Teresa mine, which is supposed to be a "lost mine" of considerable wealth, is about to be reopened and mined thoroughly. For this purpose a corporation has been formed, organized under the laws of Arizona and in Mexico, the Santa Teresa Mining company. The property is located in the Sierra Azul mountains, south of Cananea, on the west slope of the range.

The officers of the Mexican corporation are: C. L. McReynolds, president; H. H. Hordford, secretary; L. Macmanus, treasurer, and J. J. Carranco, comisario. The capitalization is 50,000 pesos.

The American corporation is capitalized at \$1,000,000, consisting of shares at \$1 per share. The officers are: C. L. McReynolds, president; H. H. Hordford, vice president; J. L. Carranco, secretary, and L. Macmanus, treasurer. Stock has been placed on the market at 10 cents and enough will be sold to permit the preliminary work.

This week the contract was let for 230 feet of tunneling, being awarded to Fred Maglianti, who, with eight men and a pack train, left for the property this week.

Specimens brought to Cananea from the property show rich deposits of native silver.

Property Transferred.
The property of the Santa Rosalia Gold Mines company has been taken over by a new corporation formed for the purpose, bearing the name, Santa Rosalia Mining company, incorporated in Arizona, with a capital of \$50,000 shares of a par value of \$5. Following the reorganization of the company comes the announcement that stock in the company will be exchanged for that in the old at the rate of one for two in the old. This stock is to be issued as \$2 paid stock. The stock will be subject to assessments, one being for 20 cents on February 15, the first assessment must be paid when the old stock is exchanged for the new. No more than two assessments at 10 cents each will be made in any one year.

The officers in the new company are: E. D. Johnson, president; O. W. Bruns, secretary, and F. J. Kohlhaas, treasurer, all of Calumet, Mich. The call is to be paid on or before March 10, 1911. After that date no transfers will be made upon the books of the company of any stock certificate unless the same shall show \$2.50 paid.

The former company was in financial trouble previous to the relief tendered by the new company, the indebtedness at the mine having over a month's wages due them.

A Mountain of Ore.
The Republica group of 54 pertenencias, located below the settlement of Sinejas, in the Altar district, owned by John Gandolfo, has been recently examined by an expert who was representing a party of Los Angeles. The property is reported to contain a mountain 2000 feet high, which can be stated to be almost a mountain of ore. The main ledge is 150 feet in width and assays \$17.60 in gold have been made of grab samples. The ore also contains considerable copper.

H. K. Chenoweth, of Nogales, Ariz., is securing some favorable results operating the Providencia mine, which is located in the Magdalena district, near Cerro Prieto. The values are in gold.

Placer ground is being successfully worked by New York parties at a point about 15 miles east of Llanos, a station on the Sonora railroad. Approximately 250 tons of ore are handled daily at a cost of about 25 cents per ton, United States currency, and the values extracted average \$3.50.

Copper Strike at Mazatlan.
A rich strike has been recently made by the Mazatlan Copper company, which is operating near Tecoripa. The mother lode has been cut and shows great richness. Seven feet of the ore have been cut at a depth of 200 feet. One of the five veins is traceable for a distance of 3000 feet. In some of the workings free gold is found without any accompanying values, while in others there are large deposits of native copper. Open cuts have been made across the principal ore croppings and several shafts have been sunk in the course of development work, which is being carried on systematically.

WEEK'S RUN AT THE ERNESTINE IS HEAVY ONE

Activity in Mogollon District Continues and New Mills Are Started.

Mogollon, N. M., Feb. 28.—At the Ernestine Mining company's property good management is noticeable through out all departments, resulting in very satisfactory production; 8588 ounces of refined gold and silver bullion were melted and 45 sacks of concentrates were produced from 655 tons of ore milled during the week.

The new mill of the Deadwood mines is running steadily and the De La Verne high compression oil engine is proving to be even a greater success than was anticipated. It runs smoothly and the oil consumption is so small that it would mean the total cost of power at the Deadwood will be held within \$100 per horse power per annum. The mill is gradually being brought up to the full capacity; 1600 ounces of gold and silver bullion were smelted from the first clean-up; during the week 290 tons of ore were treated, producing 50 sacks of concentrates.

Succore Shipments.
At the Succore mines the clean-up and shipment for first half of the month exceeded 20,000 troy ounces of gold and silver bullion. The ore is of good grade. It is reported that the Wilfley tables will be placed in commission again as one of the means for increasing the capacity of the mill. The crosscut on the seventh level is nearing the vein.

The Gold Dust Mines company's east and west drifts from the crosscut tunnel have now been advanced over 300 feet in ore. Sinking below the level is in progress.

An the Enterprise Mining company's mine high grade ore is being sacked from development on the third level. A winze is being sunk below the fifth level.

The Oaks company has work in pro-

gress on several claims of the Tunnel group.

New Mill Is Completed.
At the Treasure Mining and Reduction company, adjustments of the new mill equipment are practically completed and a larger tonnage will henceforth be handled. Contractors are steadily delivering ore from mine to mill.

The second annual edition of the Mogollon Mines Magazine is just out and is receiving the many favorable comments it merits.

During the past week or ten days an unusually large amount of snow has been precipitated in the mountains so that with no abnormal climatic conditions following, the water supply for the coming summer will be amply protected.

THINK SOUTHWEST RICH IN POTASH

Conditions in Arid Portions Favorable to Valuable Discoveries.

Washington, D. C., Feb. 28.—In portions of the arid regions of the western territory of the United States conditions are favorable to the discovery of large bodies of the potash salts, comparable even to those of Germany, according to a bulletin by the geological survey.

This information comes opportunely and its value is emphasized by the pending controversy arising over the German tax law on potash which now is the subject of diplomatic negotiations between the United States and Germany. The latter country, it is said, has a world monopoly on the known deposits of potash and the United States is her chief customer.

The geologists of the survey express the belief that potash, whose chief value lies in its use as a fertilizer, will be found in large quantities in the regions about the Rocky mountain wall and the great basin region.

HAVE FUNDS ON HAND TO DEVELOP THE UNITED GROUP

A. W. Harmer and Samuel Traylor have deposited a considerable sum in the bank at Tucson to commence operations on the Arizona United Mining company's group. A contract has been let to sink 150 feet deeper from the bottom of the 300 foot shaft. Diamond core drills will also be put in. Negotiations have been pending for some time to include the Mayflower and other reputable mines of Johnson, and the work now starting may hasten it.

the Tigre district, about 60 miles south of Douglas, Ariz., has been rechristened the Pilares de Tesor. The owners of the property have taken over the mill of the Purdy Gold and Silver Mining company at the Roy Mine. The capacity will be doubled, which will bring it up to 70 tons daily. A road is to be built from the mill to the mine and the ore will be packed on burros. The high grade ore is sacked and shipped direct to the smelter D. B. Boydton is the new manager of the property.

To Bore for Oil.
The West Mexican Oil company is preparing to begin active work in the search of oil west of Cananea at the station of Mascarena, on the Cananea branch of the S. P. lines of Mexico. The machinery has been received and will soon be in place. The first hole will be put down at a point 500 feet from the station, practically in the baryard of the Mascarena ranch.

Henry Beckman, L. A. Kannapel and C. J. Cross, who recently denounced the Haasayampa property, southeast of Cananea, will begin work at the property in a few days.

The new economizers which are to operate in conjunction with the reverberatories were placed in commission recently at the plant of the Greene-Cananea Copper company. Only one reverberatory furnace is now in operation, but No. 2 will soon have a fire in it, although it will not be placed in operation for two weeks at least.

The January output of the Greene-Cananea company was approximately 3,600,000 pounds of copper, the production of five furnaces, this being the average number in use during the entire month. It is possible that the production for February will slightly surpass this amount, although but five furnaces are still in use, and have been almost all the month to date.

Beginning this week the fuel oil which has been coming from California by way of Nogales passes through Naco.

The planing mill at the lumber yard of the company, located on the Mesa, will be moved to the slag dump in a short time and be added to the present equipment now in operation there. The building will be enlarged to make room for the additional machinery. This will centralize the entire lumber department, with the exception of the retail branch.

BRINGS ORE FROM TWIN PEAKS MINE

Dan Fraser, purchasing agent of the Twin Peaks Mining company, near Clifton, Ariz., came in direct from the mines with a number of samples which he has had assayed. The results were highly satisfactory. Some of the returns went into the thousands in gold. Mr. Fraser stated that the development on the property had now reached the sulphide zone, which had been anticipated and according to instructions from the company development work is to proceed with a large force for several months, bickering out ore.

COPPER INDICATIONS ARE FOUND NEAR JORDAN, N. M.
Tucuman, N. M., Feb. 27.—William Tanner, of near Jordan, this county reports good copper indications north and west of that place at the foot of the Cap Rock. Copper oxide is deposited on the rocks in the streams in the vicinity. Mr. Tanner is trying to interest outside parties in the matter.

CALVILLO REPORTS RICH GOLD STRIKE

Takes Ore to Tucson, Ariz., That Surprises the Residents.

Gold ore of such rich value that no estimators could agree on its worth is said to have been taken from a ledge in the Comohabi mountains, situated about 75 miles south and west of Tucson, Ariz., by Y. Calvillo and was placed for safekeeping in the Consolidated bank of Tucson.

The ore samples brought in by Mr. Calvillo consist of white quartz streaked and flecked with large pieces of free milling gold. Portions of it are said to have veins of pure gold running through them. Of the samples shown claimed to be the poorest the value has been placed at from \$35,000 to \$50,000 per ton. The story of the discovery is creating much excitement, and it is likely to occasion a rush to the hills, rivaling the now famous rush to the Glory Hole strike, in the Parker district two years ago.

PEARCE SAID TO HAVE ANOTHER BONANZA MINE

About 16 or 18 miles out from Courtland, Ariz., near the location known as West Wells, a rich strike of gold ore is reported. This late find has been located by the original locator of the Commonwealth of Pearce, which has produced more than \$5,000,000 worth of the precious metal since its discovery in 1894. Known as Johnnie Pearce, he has a body of ore three feet in width at the breast from which samples have been assayed that went as high as \$300,000 to the ton in gold. It is in a porphyry formation. About 20 claims have already been staked out in the immediate neighborhood.

COMMONWEALTH SLIME PLANT READY FOR WORK

A. J. Smith, of Pearce, Ariz., reports that the 100-ton slime plant of the Commonwealth company in the Dragoon mountains Arizona, is about ready to start work on the tailings of the

old mill, which amount to 100,000 tons. Twice this amount of tailings were worked successfully several years ago. Much of the machinery required to replace the burned mill is now at Pearce, and it is planned to have the mill ready for operation within the next eight or nine months, a new strike of ore resulting from development work, has given the property added value.

GOOD ORE UNCOVERED IN ORGAN MOUNTAIN DISTRICT

At the Big Three claims in the Organ district, New Mexico, work is being conducted along the lead in two of the claims and a considerable quantity of rich ore has been uncovered. Manager Lee, of the Sunflower Mining company, which took over the claim of the Salina Mining company in the Organ mountain district, expects to reopen the mines as soon as he can perfect his arrangements and will put on a large force of men.

INSTALS MACHINERY TO WORK UP LOW GRADE ORE

At Las Chispas mine on the border between the Mochizuma and Arizpe districts the Pedrazzini Mining company is installing new machinery, and also building and equipping a cyanide plant. This mine's ore has always been so rich that it has been sent out under guard as it comes from the stopes, but the company also has in sight a large tonnage of lower grade ores which it now proposes to reduce.

AMUSEMENTS.

"PRISONER OF ZENDA."

The first night of the police benefit attracted a good crowd at the Crawford last night. "The Prisoner of Zenda," as played by the stock company, is making a great hit.

A piece of flannel dampened with Chamberlain's Liniment and bound on to the affected parts is superior to any plaster. When troubled with lame back or pains in the side or chest give it a trial and you are certain to be much better than pleased with the prompt relief which it affords. Sold by all dealers.

LENT STARTS WEDNESDAY.

Today is Mardi Gras day and Wednesday will be Ash Wednesday, the beginning of Lent. Masses preliminary to the beginning of Lent will be held in the local Catholic churches and the 40 days of fasting will begin Wednesday.

FISH for Lent at Ardola's.

W. T. North, of 511 East Missouri, left Monday for Houston on a business trip.

BRINGS IN BAR OF GOLD WORTH \$6000.

Nogales, Ariz., Feb. 27.—John H. Campbell, of Caborca has brought in from the Clero mine, 15 miles near the Gulf of California, a bar of gold bullion, amounting to \$6000.

PROSPECTS ARE GOOD IN THE COTTONWOOD DISTRICT

Wilcox, Ariz., Feb. 28.—Mining prospects of the Cottonwood district, near Wilcox, are making fine showings.

Mrs. M. P. Baugh has arrived from Pueblo, Colo., to join her husband who is in charge of the Resurrection camp near town, in the Aravaipa district.

TO RESUME OPERATIONS IN COMMONWEALTH MINE.

Douglas, Ariz., Feb. 27.—A. J. Smith, of Pearce, says that he will soon resume operations on the Commonwealth mine at Pearce. Machinery is on the ground and it is expected to have the mill ready in eight or nine months.

OFF DUTY TEACHERS GET THEIR PAY CUT

"No work, no pay" is the new motto for El Paso school teachers, as adopted by the El Paso school board, and it has already become effective. The first intimation that the slogan had been changed from "Love thy teacher," came to the teachers at the last pay day, when deductions were made for all time the teachers have lost during the present school year.

Heretofore, the teachers have been allowed the privilege of five days' sick benefits during each school year. Hereafter, if a teacher is absent for any cause, even a half day, salary for that time is to be deducted.
